1. Diversification does not ensure against loss.

* Includes Davis Advisors, Davis family and Foundation, our employees, and Fund directors. As of 6/30/23. ‡ Over the last five years, the high and low turnover rate for Davis Real Estate Portfolio was 40% and 15%, respectively.

This material is authorized for distribution only when accompanied or preceded by a current Davis Real Estate Portfolio prospectus, which contains more information about investment objectives, risks, fees, and expenses. Please read the prospectus carefully before investing or sending money.

Objective and Risks. The investment objective of Davis Real Estate Portfolio is total return through a combination of growth and income. There can be no assurance that the Fund will achieve its objective. Some important risks of an investment in the Fund are: **stock market risk:** stock markets have periods of rising prices and periods of falling prices, including sharp declines; **common stock risk:** an adverse event may have a negative impact on a company and could result in a decline in the price of its common stock; **real estate risk:** real estate securities are susceptible to the many risks associated with the direct ownership of real estate, such as declines in property values and increases in property taxes; **headline risk:** the Fund may invest in a company when the

company becomes the center of controversy. The company's stock may never recover or may become worthless; **large-capitalization companies risk:** companies with \$10 billion or more in market capitalization generally experience slower rates of growth in earnings per share than do mid- and small-capitalization companies; **manager risk:** poor security selection may cause the Fund to underperform relevant benchmarks; **fees and expenses risk:** the Fund may not earn enough through income and capital appreciation to offset the operating expenses of the Fund; **mid- and small-capitalization companies risk:** companies with less than \$10 billion in market capitalization typically have more limited product lines, markets and financial resources than larger companies, and may trade less frequently and in more limited volume; and **variable current income risk:** the income which the Fund pays to investors is not stable. See the prospectus for a complete description of the principal risks.

Turnover Rate is a measure of the trading activity in a mutual fund's investment portfolio that reflects how often securities are bought and sold.
