* Includes Davis Advisors, Davis family and Foundation, our employees, and Fund directors. As of 6/30/23. ** Forward Price/Earnings (Forward P/E) Ratio is a stock's current price divided by the company's forecasted earnings for the following 12 months. The value for the portfolio is the weighted average of the P/E ratios of the stocks in the portfolio. † Five-Year EPS Growth Rate is the average annualized earning per share growth for a company over the past five years. The value for the portfolio is the weighted average of the five-year EPS Growth Rates of the stocks in the portfolio. Approximately 2.55% of the assets of the Fund are not accounted for in the calculation of 5-year EPS as relevant information on certain companies is not available to the Fund's data provider. ‡ Over the last five years, the high and low turnover rate for Davis Value Portfolio was 23% and 8%, respectively.

This material is authorized for distribution only when accompanied or preceded by a current Davis Value Portfolio prospectus, which contains more information about investment objectives, risks, fees, and expenses. Please read the prospectus carefully before investing or sending money.

Objective and Risks. Davis Value Portfolio's investment objective is long-term growth of capital. There can be no assurance that the Portfolio will achieve its objective. Some important risks of an investment in the Portfolio are: **stock market risk:** stock markets have periods of rising prices and periods of falling prices, including sharp declines; **manager risk:** poor security selection may cause the Fund to underperform relevant benchmarks; **common stock risk:** an adverse event may have a

negative impact on a company and could result in a decline in the price of its common stock; **large-capitalization companies risk:** companies with \$10 billion or more in market capitalization generally experience slower rates of growth in earnings per share than do mid- and small-capitalization companies; **mid- and small-capitalization companies risk:** companies with less than \$10 billion in market capitalization typically have more limited product lines, markets and financial resources than larger companies, and may trade less frequently and in more limited volume; **headline risk:** the Fund may invest in a company when the company becomes the center of controversy. The company's stock may never recover or may become worthless; **financial services risk:** investing a significant portion of assets in the financial services sector may cause the Fund to be more sensitive to problems affecting financial companies; **foreign country risk:** foreign companies may be subject to greater risk as foreign economies may not be as strong or diversified; **emerging market risk:** securities of issuers in emerging and developing markets may present risks not found in more mature markets; **foreign currency risk:** the change in value of a foreign currency against the U.S. dollar will result in a change in the U.S. dollar value of securities denominated in that foreign currency. As of 6/30/23, the Fund had approximately 16.4% of net assets invested in foreign companies; **depository receipts risk:** depository receipts involve higher expenses and may trade at a discount (or premium) to the underlying security; and **fees and expenses risk:** the Fund may not earn enough through income and capital appreciation to offset the operating expenses of the Fund. See the prospectus for a complete description of the principal risks.

Turnover Rate is a measure of the trading activity in a mutual fund's investment portfolio that reflects how often securities are bought and sold.
