* As of 6/30/25, Davis Advisors, the Davis family and Foundation, our employees, and Fund directors have more than \$2 billion invested alongside clients in similarly managed accounts and strategies. ** Forward Price/Earnings (Forward P/E) Ratio is a stock's current price divided by the company's forecasted earnings for the following 12 months. The value for the portfolio is the weighted average of the P/E ratios of the stocks in the portfolio. † Five-Year EPS Growth Rate is the average annualized earning per share growth for a company over the past five years. The value for the portfolio is the weighted average of the five-year EPS Growth Rates of the stocks in the portfolio. Approximately 3.95% of the assets of the Fund are not accounted for in the calculation of 5-year EPS as relevant information on certain companies is not available to the Fund's data provider. ‡ Over the last five years, the high and low turnover rate for Davis Equity Portfolio was 20% and 8%, respectively. ¹ There is no guarantee that the investment goals and objectives will be met.

This material is authorized for distribution only when accompanied or preceded by a current Davis Equity Portfolio prospectus, which contains more information about investment objectives, risks, fees, and expenses. Please read the prospectus carefully before investing or sending money.

Effective 6/30/24, Davis Value Portfolio became Davis Equity Portfolio.

Objective and Risks. Davis Equity Portfolio's investment objective is long-term growth of capital. There can be no assurance that the Portfolio will achieve its objective. Some important risks of an investment in the Portfolio

are: **stock market risk:** stock markets have periods of rising prices and periods of falling prices, including sharp declines; **common stock risk:** an adverse event may have a negative impact on a company and could result in a decline in the price of its common stock; **financial services risk:** investing a significant portion of assets in the financial services sector may cause the Fund to be more sensitive to problems affecting financial companies; **foreign country risk:** foreign companies may be subject to greater risk as foreign economies may not be as strong or diversified. As of 6/30/25, the Fund had approximately 18.9% of net assets invested in foreign companies; **China risk – generally:** investment in Chinese securities may subject the Fund to risks that are specific to China including, but not limited to, general development, level of government involvement, wealth distribution, and structure; **headline risk:** the Fund may invest in a company when the company becomes the center of controversy. The company's stock may never recover or may become worthless; **large-capitalization companies risk:** companies with \$10 billion or more in market capitalization generally experience slower rates of growth in earnings per share than do mid- and small-capitalization companies; **manager risk:** poor security selection may cause the Fund to underperform relevant benchmarks; **depository receipts risk:** depository receipts involve higher expenses and may trade at a discount (or premium) to the underlying security; **emerging market risk:** securities of issuers in emerging and developing markets may present risks not found in more mature markets; **fees and expenses risk:** the Fund may not earn enough through income and capital appreciation to offset the operating

expenses of the Fund; **foreign currency risk:** the change in value of a foreign currency against the U.S. dollar will result in a change in the U.S. dollar value of securities denominated in that foreign currency; and **mid- and small-capitalization companies risk:** companies with less than \$10 billion in market capitalization typically have more limited product lines, markets and financial resources than larger companies, and may trade less frequently and in more limited volume. See the prospectus for a complete description of the principal risks.

Turnover Rate is a measure of the trading activity in a mutual fund's investment portfolio that reflects how often securities are bought and sold.
